Sustainability in Healthcare

Proponents: Proff. Julia Kulova & Niko Mortiz

Sustainability in Healthcare refers to the integration of environmental, social, and economic considerations into healthcare practices and policies. This approach recognizes that healthcare has a significant impact on the environment and society and seeks to minimize negative impacts, while maximizing positive outcomes. Sustainable healthcare practices include reducing waste and pollution, conserving resources, and promoting healthy lifestyles. Sustainable healthcare also involves promoting equitable access to healthcare and addressing social determinants of health. Adopting sustainable healthcare practices not only benefits the environment and society, but also leads to better health outcomes and improved cost-effectiveness in healthcare delivery. Therefore, healthcare organizations should strive to implement sustainable practices to promote a healthier future for all.
